*Continued Examination*

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/31/2005 has been entered.

*Claim Status*

Claims 48-53 are pending; claims 1-47 having been cancelled. Claims 48-53 are rejected as detailed below.

*Claim Rejections - 35 USC § 112*

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 49 and 53 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 49 recites "wherein the third level only comprises open medical images related to open medical images from the first level." Claim 48 from which claim 49 depends recites "a first level comprising a currently viewed medical image." Obviously a currently viewed medical image on the first level must be an open image therefore, it is unclear how "the third level only comprises open medical images."

*Art Rejection Precluded*

Claims 49 and 53 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Due to the indefiniteness of the claim, no art rejection is provided in this Office Action.

*Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 48 and 50-52 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat No 5,734,915 issued to Roewer, hereafter Roewer.

Claims 48 and 52:

Roewer discloses opening:

a plurality of medical image files to display a plurality of medical images [Figs 4A-4C, col 3, lines 35-48, col 4, lines 35-50, window-oriented commands]

prioritizing the plurality of medical image files using a prioritization scheme having at least three levels including [col 5, lines 39-45, WYSIWYG, abstract, group of images]:

a first level comprising a currently viewed medical image [col 5, lines 39-45, WYSIWYG, abstract, group of images]:

a second level comprising medical images in a viewing stack [col 11, lines 45-50, col 15, lines 25-30, col 33, lines 30-35]

a third level comprising medical images related to medical images with a higher priority [archive, col 5, line 41], wherein the medical images in the viewing stack and the medical images related to medical images with a higher priority are not currently viewed medical images

the medical images from the first level are designated with a higher priority than the medical images of the second level and the medical images of the second level are designated with a higher priority than the medical images of the third level [col 13, lines 35-45]

unloading from the memory of the workstation a medical image file having a lower priority than at least one of the open medical image files stored in memory, wherein the unloaded medical image file includes at least a portion of at least one of the open medical images [windowing per Apple Macintosh System 7, col 10, lines 58-63, col 15, lines 25-35]

Claim 50:

Roewer discloses the elements of claim 48 as noted above and furthermore, Roewer discloses further comprising the step of saving the visual display settings [frame record, col 17, lines 38-52] of the unloaded medical image file such that if the unloaded medical image file is not closed and a user decides to redisplay the unloaded image file, the unloaded medical image file appears virtually open to the user and as if the unloaded medical image file had not been unloaded [refresh Window redraws a PCW window with all its contents, col 13, lines 64-67].

Claim 51:

Roewer discloses the elements of claim 48 as noted above and furthermore, Roewer discloses wherein the unloaded open medical image file is transferred to a storage device connected to the workstation by a network [col 8, lines 15-33].

***Response to Arguments***

Applicant's arguments filed 8/31/2005 have been carefully considered but they are not persuasive.

**Applicant Argues:**

Applicant states in the second paragraph of page 6 "As stated within the Office Action, Roewer fails altogether to teach a prioritization scheme, wherein the second and third images are not currently viewed per claims 48 and 52."

**Examiner Responds:**

Examiner is not persuaded. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., wherein the second and third images are not currently viewed) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

However, Roewer discloses images in the queue and discloses images in archive as noted in the above Office Action. Such images read on the second level and the third level and obviously, such images are not open images.
